

full overview

Functional diagram of a biogas plant made by agriKomp

Güllewerk – the first biogas plant in a container comes on a trailer: unload and its ready to go!

agriKompakt – modular biogas plant means fast construction time and affordable price

Individual biogas plants – from 50 kW to 2 MW and larger

Individual biogas plants – designed for your special needs

Rated as “excellent” by PROFI magazine

The results of the operator survey conducted by the agricultural magazine “profi” in the issue 11/08 leave no doubt: For the question “Would you build with your manufacturer again?”, we scored the best result compared to our competitors. This top position motivates us further to develop innovative, reliable and efficient technology for you, to build high-quality components and provide comprehensive and excellent service.

efficient Biogas plants

competence

in planning and building biogas plants

Your competence in energy production

Energy production has always been in the field of farming – this is what you as a farmer is a specialist in. Why waste untapped potential? The use of organic fertilizers and remuneration from the electric tariffs are sure to increase your profits in the future.

Our competence – biogas

Our goal has been and will remain to create opportunities for farmers to get into the energy market, quickly and at affordable prices. Over 15 years of building biogas plants and several hundred biogas plants all over Europe prove the reliability and build quality.

Our reliable biogas components

On the basis of this experience, we have developed purpose-built components and matched them with one another in our biogas plant to provide high quality complete plants. In designing and fabricating these components we give priority to high Quality, Robust Construction and high level of energy efficiency. The components have proven themselves for many years in use with various feed stocks such as grass, maize, farm manure etc. Our key components – Biolene, Paddelgigant and Vielfrass – have set standards in terms of stability, reliability, and energy efficiency.

Vielfrass solid material feeder with 50 m² dosing unit and Biolene gasstorage

Paddelgigant - the agitator system from agriKomp for all renewable feedstocks

Biolene - expandable gas storage

Quetschprofi - the separator for slurry and digestate

experience

is the heart of a specialist

Benefit from our know how

A wide range of experts cover all aspects of efficient biogas technology, to provide our customers with a complete service. From conceptional design and planning through plant construction to seamless operation, service and biological support with our own laboratory. Additionally, our heating concepts ensure profitable utilisation of the available heat recovery potential.

As specialists, we accompany you step by step along the way towards your own profitable biogas plant. Each system can be expanded without problems. No nasty surprises for you: fixed prices ensure you keep an eye on costs.

Our biogas systems impress by ensuring consistency. The extensive stock of spare parts assures a reliable, fast and above all, long-term availability of parts. A well trained service team, made up of specialists in all technical disciplines remain on hand for you for many years after installation of your plant.

dependence

experience – transferred into practice

Long term Partnership

A high level of confidence and high quality shapes the success of each project for our customers. This strong co-operation will remain after completion, insuring customer support and service for years of guaranteed stable and reliably working biogas plant for you.

A large stock for standard parts and spare parts guarantee fast delivery

Ongoing research and development for better biogas production

The right biogas solution for you

Would you like to know more about biogas plants, another way to use untapped potential to increase your profits?

agriKomp headquarters – Merkendorf / Germany

Everything to turn your biogas plant to profit

- Know-how from hundreds of biogas plants built
- Continuous Research, development and production of own components
- Fast and reliable customer service
- Biological support for your biogas plant
- Use of heat by local heating network and microgas network
