Agrifac AirFlowPlus: air assistance spraying reinvented

The care of special crops and cultivations often requires special and specialised solutions. Solutions you will find at Agrifac. Agrifac has many years of experience as THE preferred specialist for diverse spray technologies. For crops with which air injection is essential to induce growth, Agrifac introduces the new **AirFlowPlus** air injection system.

AirFlowPlus: special crops require special solutions

This system sets itself apart by the cleverly engineered construction with a fan every three metres. This creates an air yield not previously seen, and an absolutely uniform air distribution over the total width of the spray boom. Regardless of the work area width and the number of boom sections you are working with! Wear and tear of airbags is all in the past. The direction of the fluids and air stream is easy to adjust to the conditions and the wind direction. You can angle the entire spray boom forward or backward so that the airshaft and the outflow opening do not twist in relation to each other. Agrifac **AirFlowPlus** comes standard equipped with pneumatically operated nozzle bodies for the benefit of the entire circulation system.

The advantages of AirFlowPlus:

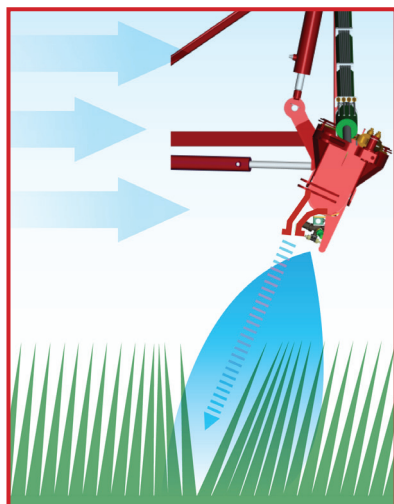

- + The most air
- + The best penetration
- + The most flexible
- + Saves chemicals

Tailwind, with with a backward angle

Headwind, wWith a forward angle

No wind, **AirFlowPlus** in neutral position

About Agrifac Machinery B.V.

Agrifac's goal is to become the number 1 supplier of high quality sprayers, sugar beet harvesters and potato harvesters. To this end, all Agrifac machines are developed in accordance with the "4Es for growers" concept: *Efficiency, Economy, Ergonomics* and *Ecology*. This results in machines that are good for the driver, the business owner, the supplier and the environment. The machines retain their value, are efficient and naturally trend-setting technically, with the lowest costs per hectare as the result. "For growers" also refers to leading and growing

companies. By this we mean Agrifac customers, but also Agrifac as a company itself. "For growers" also stands for our roots: the care of crops in a manner as economical as possible with more profit as the result.
